WHAT'S NEW IN VERSION 5.3

- **Dashboard** –The Opalis dashboard displays key process metrics such as success and failure status, duration, load distribution, and an ROI graph of automated IT tasks. This display enables IT management to track how processes can impact the delivery and performance of IT services.
- **Enhanced failover and deployment functionality** – Opalis Integration Server 5.3 enables you to designate primary and standby Action Servers and assign Policies to run on a specific Action Servers.
- **Invoke Web Services** – enhancements to this object enable you to execute a web service with XML parameters.
- **Format Date/Time**– this object enables you to transform existing date and time formats into custom formats.
- **Generate Random Text** – this object generates random strings of text.

PERFORMANCE ENHANCEMENTS IN VERSION 5.3

- **Higher Client speed** – dramatic improvements in Client performance and screen refreshes that keep up with the speed you work at.
- **Faster Policy execution times** – Policies execute at lightning speed thanks to innovations under the hood.
- **Changes to Policy Deployment** – The policy deployment process has been simplified, now you only need to check a Policy in and click Start to run it.

EXTEND THE BENEFITS OF YOUR OPALIS IMPLEMENTATION

- **Integration Packs** – Opalis Integration Server now integrates with 25 infrastructure management products. Integration Packs extend automation capabilities by integrating and orchestrating your existing management tools. The newest additions support **BMC Atrium**, **BMC Remedy**, **Microsoft SCOM**, **Microsoft Active Directory**, and **VMware VirtualCenter2**.
